

THE MIDWEST (ZONES 6-7)

While your last frost date in early-late April may seem a long way away, spring is looming for the southern heartland of the United States. This is an interesting place to garden because you have a little bit of everything, each year from gentle springs, to rip roaring thunderstorms, to heat waves and cold fronts, and it takes a wide variety of plants to cover all the bases. Spring plants need to be able to adapt to the heat of summer and a wide variety of conditions. That is what we at Proven Winners® look for: tough, long season performers. Here's a quick list of great plants to get you through the entire gardening year!
