

## SOUTHEASTERN US (ZONES 7-8)

Spring for most in the Southeastern US arrives early. But gardening in the southeast is a challenge. Spring quickly changes to summer and the heat and humidity grow more and more intense so that by June many gardeners have retreated indoors to watch their garden from the comfort of the air conditioning! Picking plants that will last an entire summer in the southeast can be difficult; a plant that can withstand high day and night temperatures and high humidity can be a challenge, but we've narrowed it down for you to some outstanding and very tough flowers to try!
