

SOUTHEASTERN US (ZONES 9-11)

Southern gardeners may be the luckiest of all since they are able to grow beautiful gardens all twelve months of the year. Ample rainfall helps your plants thrive in the warm, humid weather, though you may prefer the comfort of air conditioning indoors. Take advantage of cooler fall and spring temperatures by doing most of your planting during those times of year. Plan to switch out your annual plantings for more heat tolerant varieties in your summer containers. A great tip is to use larger containers or self-watering AquaPots® since they hold more water and won't dry out too quickly in the heat. Here are a few heat and humidity loving plants for you to consider.

ANNUALS

1. ColorBlaze® *Solenostemon* Series
2. Heart to Heart™ *Caladium* Series
