

## NORTHERN US & EASTERN CANADA (ZONES 5-6)

The last frost date for your area is generally early to late April, and it is not too early to get started on planning for your garden. We know your springs can be unpredictable, so start the year looking for the healthiest cool season flowers. Try keeping them in a sun room or garage and moving them out each day to get adapted to your outdoor conditions. An early start means a longer season of color and enjoyment, but be prepared to protect them if cooler weather sets in.
