

THE NORTHEAST & MID-ATLANTIC (ZONES 6-7)

In your region, spring can be iffy with late frosts and sudden shifts to hot and humid summers depending on your location. While your last frost date is in early-late April, spring can come and go quickly, so successful planning is the key to have garden color all summer long. Start checking garden centers soon, as this is the time of year when they have the best selection, plus you can beat the crowds! This is a great way to escape the last of winter's cold fronts, snuggled in a warm greenhouse looking at beautiful flowers. Ask about plants that can take some cold weather and still perform all summer as well. Here are a few we recommend for your area!

ANNUALS

1. Snow Princess® *Lobularia*
2. Diamond® *Euphorbia* Series
3. Supertunia Vista® *Petunia* Series
4. Superbena® *Verbena* Series
